### **Project Details :**

- **Project Title** : THERMAL PERFORMANCE OF EARTH TUBE HEAT EXCHANGER
- **Institution** :MANIT BHOPAL
- **Description** :An earth to air heat exchanger is a system which increases the interior temperature of the building during winter and decrease it during summer, by using the thermal potential of the ground. Throughout a year, the outside air temperature in Bucharest varies from 15°C to 40°C, while soil temperature has a lower range, only from 4°C to 18°C. The ground contains heat that can be captured and transported through the pipes inside the building.
